

SURFACE SWEEP™

SURFACE HOLE SEALANT / VISCOSIFIER

DATA SHEET

GENERAL INFORMATION

SURFACE SWEEP™ is a unique blend of high yield polymer and bridging agents. It is specially formulated for upper hole, fast drilling in sand or gravel formations.

BENEFITS

Excellent hole cleaning characteristics ▪ Yields quickly ▪ Prevents seepage and hole mud loss ▪ More economical than expensive polymers ▪ Very effective at low concentrations

APPLICATION

SURFACE SWEEP™ should be pumped in a pill fashion at 10-15 ppb while drilling massive sands and/or pea gravel. Depending on the area being drilled, 2 ppb to 4 ppb system treatment might be required to effectively clean and seal the wellbore.

SERVICE

A fluid technician is available 24 hours a day to assist in specific recommendations based on actual hole conditions. Application techniques that are proven and field tested on numerous well sites ensure you receive the best products and service available in the industry.

PACKAGING

SURFACE SWEEP™ is packaged in 25 lb. bags; 50 sx per pallet.
